

Tabby

Lightweight Hospitality POS mobile, unique, innovative, affordable

Tabby Hospitality

Tabby provides a contemporary platform that is easy to use and maintain, but without the budget strains and complexity of a full-scale POS system. With minimal assistance, merchants can setup their own store database; establish items, prices, departments, groups and other options. Operation is intuitive; tablet-savvy operators are productive after just minutes of instruction.

What is Tabby?

Tabby is a WEB Server available in two different configurations. **Tabby Embedded** is ideal for many small installations and conveniently provides

the Tabby device embedded in a SAM4s Ellix 40 thermal receipt printer; **Tabby SL** is a compact standalone device that allows you to install the printer or printers of your choice in your Tabby network.

To enable wireless mobility, simply connect Tabby to a wireless router. Tabby runs on any browser capable device regardless of operating system, including PCs, mobile devices or tablets. Use Tabby to register sales, print receipts, and record payments. Tabby Backoffice provides store management tools, database maintenance, stock entry and management reports.

Tabby Advantages

- Tabby does not rely on tablet or device resources.
- No application to install – adding or replacing a tablet or mobile device can be done “out of the box”. Simply open your browser and enter Tabby’s IP address.
- Remote management is inherently ready.
- No Internet is required, but an internet connection may be desired for emailed reports or remote access.

Tabby

Tabby Hospitality a lightweight POS for restaurants

Tabby hospitality is an extraordinarily well designed point of sale application capable of performing all expected tasks in a small table-service restaurant – including order entry, accepting payments, maintaining controls and providing robust reports.

For Your Servers

Insure quality customer service by letting your servers input orders quickly and manage them intuitively. The default view is a table layout of your restaurant. Simply tap on a table to begin an order.

- Select items may be organized in groups for fast access. Prompts offer prep options, condiments and add-ons.
- Tables are color-coded to reflect their current status. For example, green tables are open and blue tables are settled, but still occupied. Managers and servers can view the status of each table as orders are taken, sent to the kitchen, served and settled.
- Tabby offers flexible payment options.
- You can pay by seat and split items or split bills (before or after the order is placed).
- Servers must settle or transfer outstanding tables before ending a shift.

Flexible Options

Select from a variety of options to let Tabby Hospitality fit the way your restaurant works.

- Tabby software was created and written by POS professionals with decades of experience, insuring integrity, security and flexibility to suit the way you do business.
- Programming is intuitive and enables do-it-yourself database maintenance, or work with your authorized Tabby POS provider to maintain your system.

Tabby Reports

Longer period reports are database-style reports. All reports will accumulate based upon the calendar day/date. Historical reports can be called up for any past day's activity.

- Begin and end shift functions track total shift times for each employee.
- Management cannot run end-of-day until all shifts are closed, insuring payment integrity.

Tabby Back Office

The Tabby Back Office tool provides managers with an easy-to-use dashboard from which they can maintain databases – for items, prices, departments, tenders, ingredients, recipes and taxes. Reports and charts can be selected from specific dates and filtered to provide meaningful information.

Tabby

Select Your Preferred Device

Whatever your device preference, Tabby is ready. Many find that a 10" tablet such as the iPad provides the best combination of screen size, mobility and familiarity. Others may prefer a fixed terminal – which may be more cost effective than an iPad and a stand. You choose; you can access Tabby using any device, running any operating system that supports a browser.

Connectivity

- Connects to up to 8 point of sale devices.
- Tabby's serial ports support up to 4 devices.
- Supports up to 4 printers.
- Each printer can drive up to two cash drawers.

Select Your POS Peripherals

Peripherals supported include remote printer, cash drawer, customer display, bar-code scanner and electronic payment device.

Electronic Payment Security

Tabby uses the PA-DSS validated Datacap Tran™ devices to process integrated electronic payments. Credit, debit, gift and EBT payments can be accepted.

Tabby

Reports

Significantly, Tabby doesn't just maintain monthly or yearly reports, like other systems. Instead Tabby archives each daily report in its database. So if you are planning staff for the upcoming holiday weekend, you can go back and look at sales on the same day for previous years. With all reports in the report database, you can select how you want to review sales by day, by week, month, quarter, year or for any range of days you select.

Data Stored Locally – Not in the Cloud – Accessible Remotely

- Daily X & Z Reports
- Sales Statistics Reports
- Payments Reports
- Payment Statistic Reports
- Group Reports
- Operator Reports
- Item Reports
- Inventory Reports
- Department Reports
- Journal Management – Search, Review, or Reprint Receipts from the Electronic Journal
- Sales Overview Dashboard
- Detailed Sales Charts and Graphs
