Parallel Port
Accommodates older, non-USB
peripherals, such as printers.

Receipt Printers
Printer Cable centronix end clips on to rear of printer. The male 32-pin
end connects to PC's female parallel port. A black 3-pin power cable is
part of larger power supply that eventually plugs into power source.
A telephone-type wire with a male end connects to female interface at
rear of printer. The telephone-type cable connects to Cash Drawer.

Report Printers
Can use PC parallel port.
When parallel port is taken
the alternative is connecting
to PC with a USB cable

**PC Mid-Tower**   **PC Desk-Top**

Counter Shelf

Plan appropriate place for PC. It shoud be placed on a shelf directly below your POS Station. To hide all cables going to the PC a 2-1/2 "hole drilled into the counter is recommended. The PC must be placed in an accessible, well vented area near a power source outlet. It is suggested to use a surge protector or better yet…. An Uninterrupted Power Supply (UPS-Battery)

POS Sales Station
Cash Drawers

Learn More about MMF Cash Drawers
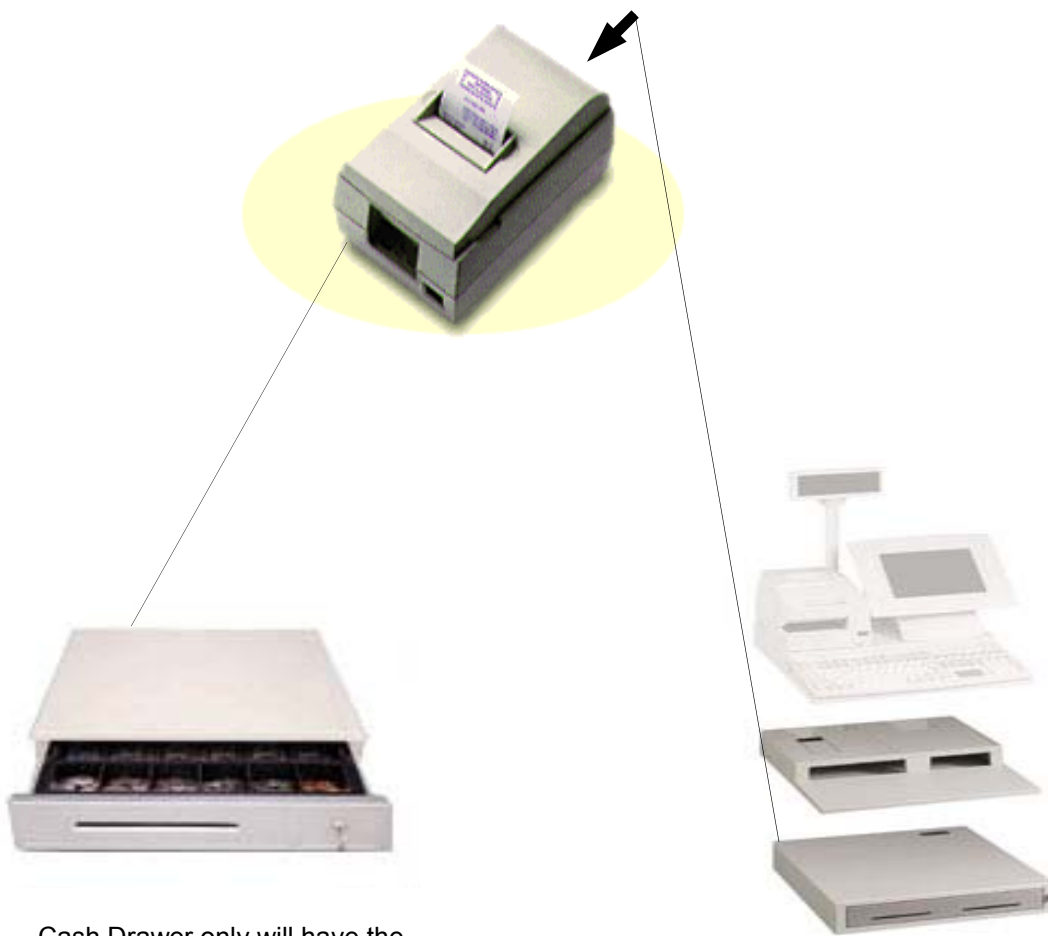

Cash Drawer only will have the Cable hard-wired inside the drawer. Just connect the male telephone-type end to the rear of the printer.

MMF Platforms will have a separate cable. With the 3-pin end connect to Cash drawer. Must remove rear plate to do so. Connect male telephone-type end to the rear of the printer.
